

Key

Comes supplied with two or three polished nickel keys and can be keyed alike or key to differ.

Tail-piece/Cylinder or Cam Bar

Connects with and operates the night latch and has an adjustable bar which has notch marks to enable it to be cut to length.

Night latch

Surface fitted to the inside of your door to provide a secure solution for retrofit purposes when moving into a new home/premises. Simple to fit to a variety of different door thickness

Cylinder Collar

Designed to tidy up the appearance of the cylinder and to aid in weatherproofing your door.

Rim Cylinder

Fits into the night latch and comes in brass as standard but is also available like this version in black to help finish of the look of your door.

Keep/Receiver/Strike Plate

Surface fitted to your door frame and allows the night latch a secure fixing to close onto.

Wood Screw Fixings

Supplied with wood screws to affix the latch and strike plate securely to your door.

Night Latch - Traditional or Modern Case

A standard night latch which has been traditionally used for many years to provide a lock on front doors. Offers keyed access to a property and is sometimes used instead of a sash lock or in conjunction with one. A deadlock can also be used to provide extra security measures. If using a night latch your door will latch and you could use it on it's own but ideally it would need a cylinder pull fitted to the door to help it being closed.

Product Assembly

Screw or Bolt Fixings

Night Latch

Both images show the exterior view of the cylinder from a night latch. The image on the left shows the usual brass cylinder has been replaced with our black version and is paired with a knob set to help with opening and closing of the door. Whereas the door on the right has no

knob set and therefore was fitted with a brass cylinder pull so that the owner can use that to pull the door closed on exiting the property. All of our night latches have a backset of 60mm which means that the centre of the keyhole is 60mm away from the edge of the door.
